

The Half-Wedge.

5th March 2010.

Please be aware that hollow tining will occur on the course commencing on Monday 15th March (weather permitting). This is necessary as part of our long term strategy in accordance with the STRI schedule we are successfully following. Disruption will as always be kept to a minimum and even more so with the introduction of smaller tines and the hope of a speedier recovery especially with the use of the greens roller.

During the month of April when temperatures are conducive we will carry out a programme of greens seeding and a light top-dress which will be hardly noticeable but hugely beneficial for the golfing season ahead.

The Greens staff would appreciate any help during the March operation of removing cores off the greens and will also appreciate members' patience and understanding during this vitally important process. If you are able to assist in any way please inform Darren in the shop.

Regards,

Dai Thomas
Chair Greens.
